Institute for International Economic Studies,
Stockholm University

EDUCATION

Ph.D. student, Institute for International Economic Studies, Expected Completion: June 2026

Visiting Ph.D. student, Paris School of Economics, 2023

Ph.D. student, Department of Economics, Stockholm University, 2020–2022

M.Sc. in Economics, Stockholm University, 2017–2019

B.Sc. in Economics, Stockholm University, 2014–2016

DISSERTATION COMMITTEE

Associate Prof. Arash Nekoei
Institute for International Economic Studies,
Stockholm University
Arash.nekoei@iies.su.se

Prof. Torsten Persson
Institute for International Economic Studies,
Stockholm University
Torsten.persson@iies.su.se

Prof. Mårten Palme
Department of Economics,
Stockholm University

RESEARCH AND TEACHING FIELDS

Primary field: Health Economics.

Secondary fields: Behavioral Economics, Public Economics.

TEACHING EXPERIENCE

2017–18	Economics I Micro & Macro (Bachelor level), TA,
2018	Math workshop (Bachelor level), TA, 2018
2019	International economics (Bachelor level), TA
2022	Econometrics II (Master level), TA, 2022

SCHOLARSHIPS, HONORS AND AWARDS

2024 Research grant (with Monir Bounadi), Carl Mannerfelt Foundation, 30,950 SEK

REFeree ACTIVITIES

Health Economics, EAYE Annual Meeting 2025.

OTHER PROFESSIONAL ACTIVITIES

2019	Research assistant for Professor Mahmood Arai
2022	Research assistant for Assistant Professor David Schönholzer
2022–23	Local coordinator for European Network for Training in Economic Research
2024–25	Student representative, Board of the Institute for International Economic Studies (IIES)

SEMINARS AND CONFERENCES

SUDSWEC annual conference 2021, ASWEDE workshop 2021, SUDSWEC annual conference 2023, Paris School of Economics 2023, SWECOV 2023, ENTER Jamboree 2023, SUDSWEC annual conference 2024, Université Libre de Bruxelles 2024, Danish Historical Political Workshop 2025

RESEARCH PAPERS

Adverse Health Events and Vaccine Hesitancy (Job Market Paper) *with Svenja Miltner*

Abstract: Vaccination forms a cornerstone of public health, combining private protection with reduced transmission to others. Motivated by this, we study how prior adverse health events affect vaccine hesitancy. We use new, nationwide Swedish administrative data that link individual vaccination records, reports of adverse drug reactions, and detailed healthcare utilization across the entire population. We first examine how individuals draw on their past experiences when making new vaccination decisions. To do this, we analyze a severe, well-identified case: narcolepsy, a severe neurological disease plausibly induced by the 2009–2010 swine-flu vaccine. We find large reductions in COVID-19 vaccination more than a decade later, with spillovers to close family members, suggesting that individuals rely extensively on own experiences when making decision about their health. The effects do not attenuate among those with high health literacy but show some evidence of attenuation with extensive prior healthcare contact. Second, we assess the broader social costs of routine adverse events by studying serious events from all licensed pharmaceuticals. We find that people’s learning is narrow: adverse events from non-vaccine drugs have little effect on later vaccination, whereas serious vaccine-related events substantially reduce uptake. Together, the two analyses show that individuals rely heavily on their own experiences and that these effects are long lasting but domain-specific. In the final part of the paper, we find that similar patterns extend to well-established childhood vaccines, suggesting that severe adverse events can erode trust in official safety communication, rather than solely reflecting learning from experience. While the overall impact of routine adverse events on vaccination is limited, rare but severe vaccine-related events can meaningfully lower uptake, providing a cautionary tale for vaccination campaigns.
